

## **CHANGES NEVER CHANGE**

**Prof. Arun Kumar S**, Principal, BMA College, Bangalore

**Dr.S. Jambulingam**, Associate Professor, Dept of Business Administration, Annamalai University,  
Chidambaram, Tamilnadu

-----  
----

Changes occur write from the birth of this Universe . Our father of our Nation Mahatma Gandhi once stated that “you will get whatever you wish”

### **From Stone age to Materialistic and INFORMATION Era.**

- ▶ The present World has experienced sea changes from the birth of the Universe . The society now enjoying several facilities due to scientific and Technological developments in communication Industry, automobile Industry, Electronic Industry, Biotechnological industry , Aerospace, Aeronautical and Air Transport Industry , Agricultural and Animal husbandry Industry , etc ;

### **Education and Un employment environment :**

- ▶ We could see several advancement in all walks of field in the World , especially in Developing and Developed nation.
- ▶ When we study the environment of unemployment in India, We need to look into several other factors related to that.
- ▶ India, an Incredible India ; no doubt it is a rich country in all fields or all walks of life from the ancient period to the modern era of 21<sup>st</sup> century.
- ▶ Many invaders from other countries have taken away from India several precious materials and several Ancient health care knowledge system .
- ▶ Since Independence of our nation till date There were many developments and changes in India in all walks of life and fields .
- ▶ However, what we have been achieved may not be sufficient to meet out the requirement of Population in India.

### **Inclusive Growth for India;**

- ▶ Since 1947,We had enough struggle (both central and State government) to overcome many problems and achieve prosperity in economy to lead sustainable and peaceful life. But we could not achieve as we envisaged.
- ▶ Now let us introspect the reason why We could not achieve as we targeted .

- ▶ For the study, we can take Education system and its services in India, which normally extend its tentacles to the growth of other system and contribute to the development of a Healthy nation.

#### **Education system in India;**

- ▶ Indian Education system has contributed several things after Independence with the help of Mechanisms like UGC ,AICTE, Ministry of Education both state and central : Directorate of School and College education, Directorate of Technical Education , Directorate of agriculture and medical education , Directorate of Science and Technology, etc ;
- ▶ But, in spite of all the efforts taken by Government of India, Our Standard of Education and educational Institutions are not able to march along with the Universities / Colleges schools / training institute ; not only that we are still below the Rank estimated.

#### **Swamy Vivekananda and Younger Generation;**

- ▶ It was Swamy Vivekananda who invoked younger generation in India to achieve Sustainable growth and peaceful life of human beings in India.
- ▶ But un fortunaetly Swamyji passed away at Younger age.
- ▶ Why we take swamy vivekanandaji as model in this article is mainly ; the concept of Swammy vivekennda would create Employment opporutuity to our Younger generation and also improve their Culture , positive behaviour, manners, social responsibilities, etc;

#### **High potential sources of Younger generation in India.**

- ▶ It is swamy vivekananda stated that every human both male and femal are gifted with divinity and it should be properly invoked and made use of their resources for prosperity.
- ▶ In the 21<sup>st</sup> century, fortunately many saints are living and helping society to achieve happy and prosperous life.
- ▶ In spite of the above, We are finding difficult and Younger generation are facing severe unemployment problems after their studies.

#### **Younger generation to play their vital role as Facilitator;**

- ▶ In India, there were many good attempts like Economic Reforms during 1991 and business and trade flourished due that .
- ▶ Many developments taken place in educational activities , and its services, etc.
- ▶ But Government of India with State Government is struggling to overcome unemployment opportunities of educated people . Alternative education like Entrepreneurship development courses, start up programmes, lot of incentives for promotion of Industries, etc were provided to ease the problem of un employment.

**Changes continuously taking place;**

- ▶ From 18<sup>th</sup> century to 21<sup>st</sup> century, several developments took place in India and in the world.
- ▶ There is a beautiful saying that “changes never changes”. Changes take place every second in all walks of life . Especially in science and Technology , several changes have occurred. In electronic industry, unimaginable changes have occurred. Similarly, in communication and information Technology , automobile industry, defence material and equipment, Aerospace, biotechnology, medicine, etc, scientists and technologists have contributed new concepts, products and sources to the modern society.

**Sustainable and peaceful life:**

In the modern Electronic and information Era , Human being are fighting with the mother of Nature and Mother earth with the help of advanced science and technology and new , new inventions. Every thing ,we are trying to manage at the tip of our finger. It is more or less like robotic culture. In the modern Society, culture of Human being are thoroughly changed . Especially, Younger generation without realising the consequences of their activities, enormously using technological devices in their day –today activities; mostly the smart phone and its uses enormously would create all kind of calamities like Global warming, stnamy, earth quack , etc,;

**Population may not be the reason;**

- ▶ As human being are not happy with the result of highly advanced technological devices, they are looking seriously healthy changes to lead their sustainable and peaceful life. People are facing difficulties to get their minimum requirements like drinking water, purified air, shelter to lead their life.
- ▶ At this juncture, politicians , Economist, and other management experts are repeatedly stating that population increase is the main reason for all kind of calamities in the world.

**Un EMPLOYMENT VS POPULATION;**

- ▶ Of course, population may be one of the valid reason for the struggle of modern society. Any how, we need some solution to overcome the existing problems mainly un employment of educated younger generation.
- ▶ The author of this article with his wild thinking habit is providing a valid proposal for the same.
- ▶ Younger Educated generation to play their vital role to facilitate all activities in the nation.
- ▶ It is well stated that improving sanitary and health care system would be like maintaining savings Bank account .The expenses for the purpose of improving would doubly rewarded in future. People may increase their PQL- physical quality of life, and healthy generation may be the result out of it.
- ▶ As such , the system in India is not able to achieve good result .

- ▶ To solve the problem existing , if educated youth are provided skill based training (rigorous) during their academic session as value based sessions and also practical exposures like one month compulsory Rural camp for students and Faculties ; and provide them opportunity to work as facilitators along with the existing officials for not less than two years with a nominal consolidated honorarium ( Rs 10000- 15000/ month), The result would be excellent.
- ▶ The Facilitator would work like additional force with the existing official and there may be chances for improvement in the services and also corruption can be eradicated with the result.

#### **Waste management, security and crime branch system**

- ▶ We found that that waste management is another severe problem both central and state government are finding difficult to overcome and also spending huge amount for the same;
- ▶ In case of deploying the facilitators in addition to the existing forces, there would be a better result and improvement.
- ▶ Similarly, the crime activities are increasing day by day and the concerned officials are not able to control theft, murder, ATM looting , sexual abuses, etc. For the purpose, we can make use of the system proposed ( Facilitators ).

#### **SOCIAL AND CULTURAL EDUCATION.**

- ▶ The author of this article emphasis cultural changes among younger generation would definitely elevate India to incredible India and model for other nation
- ▶ Recently that CBSE board has introduced Civic and Moral Studies as compulsory subjects. It is an excellent turning and change to improve the culture of students.
- ▶ We need to take this kind of changes for the healthy and economical growth of our nation.
- ▶ At this juncture, we may take the great Abraham lincon president of USA statement regarding the progress card of his son” I wanted to see his remarks not marks”.
- ▶ If required ,based on the ideas and concept of this article , we can work out a detailed schemes/ project report in order to implement the scheme immediately by Government of India , both central and State.

#### **Educated younger generation to serve as Facilitator.**

- ▶ The present Education system both central and state is struggling to solve employment problems for educated youths in all field of studies, in spite of their Entrepreneurial schemes and skill development programmes in India.
- ▶ In India, there is mushroom growth of educational institutions, Universities , Business schools, etc,
- ▶ Education system without experiential /hands on training are considered not useful to generate employment opportunities.

**Huge potential for employment opportunity to be explored ;**

- ▶ There is no doubt, enormous opportunities in India can be explored for providing job opportunities . Only thing, we should have positive approach for the purpose.
- ▶ For this study, we may study and analyse one /two high potential areas like ;
- ▶ 1.Waste management
- ▶ 2.sanitation and health care system
- ▶ 3.security and crime departments.
